

Solis™

Legal Hold | Data Collection | Early Case Assessment

CONTROL

Control costs, risks, effort and process.

ACCESS

Access the heart of your data accurately and securely.

INSIGHT

Gain a deep understanding of the scope and content of data.

GOVERNANCE

Monitor and record business activity to ensure policies and procedures are followed.

RISK

Mitigate risk by better managing enterprise data retention rules.

COMPLIANCE

Ensure compliance with regulatory and legal requirements.

LITIGATION

Manage litigation holds, preserve chain-of-custody, and maintain evidentiary integrity.

THREE KEY COMPONENTS FOR LEGAL AND COMPLIANCE DATA MANAGEMENT

For corporate IT and Legal personnel, Solis™ gives peace-of-mind with respect to data used in litigation, regulatory matters, internal audits and investigations. Solis™ is a software solution that is managed and controlled behind-the-firewall by corporate IT or Legal. It is designed and built to analyze, preserve and securely transfer corporate information used in compliance, regulatory investigations, litigation and internal investigations.

Solis™ handles corporate information in a secure way, such that it can be introduced in a legal proceeding without it being challenged. Solis™ protects the corporation from data misuse and assists in guiding the company through complicated legal issues related to its data compliance and security.

DATA DEFENSE AND MANAGEMENT STRATEGIES

- Auditable, accurate and secure enterprise-class system that allows corporations to easily manage critical data
- Data capture and analysis framework that minimizes the work to be performed to meet regulatory and litigation requirements
- Gives the information management professional increased confidence that the organization's electronic information is accurate, accessible and trustworthy
- Controls risk and manages costs through proactive regulatory awareness and early case assessment

Solis™ protects you, your company and your data in circumstances where that data must stand-up under legal and regulatory scrutiny.

- Seamlessly, accurately and securely captures network-wide data without interrupting employees' daily work
- Provides rich search, filtering and analysis capabilities
- Creates a tamper-proof, distributable package for the secure transfer of relevant data outside the firewall
- Continuously captures developing materials of relevance, based on specified criteria
- Protects and preserves corporate information without interfering with IT operations

Solis™ provides your organization with the ability to identify, understand and preserve data from across the enterprise so that you can better prepare and more quickly and accurately respond in legal and regulatory matters.

Solis™ allows corporations to successfully manage information in a secure, reliable and cost-effective manner.

Specifications:

HARDWARE

Multi-processor Windows based Application Server – Standard Hardware Specification (e.g., 3U SuperMicro)
IIS Web Server – Standard Hardware Specifications (e.g., 1U Dell PowerEdge)

STORAGE

Attaches to your SAN or NAS
iSCSI & Fibre Connectors

NETWORK

MS Active Directory
SMB Aware
Linux Compatibility
Integrates with SAP and other HR System

DATA TYPES

All Workstations and Network Files
Microsoft Exchange data
Microsoft SharePoint
IBM Domino/Lotus data

Direct Document Review
Secure Data Transfer
Targeted Preservation

Compliance Templates
Simple User Interface
Subject Matter Expertise

Automated Rules Tracking
User Alerts
Legal Data Standards Compatibility

Available Options:

COMPLIANCE MODULES (2010)

HIPAA
SOX
GLBA
FINRA
EEOC
FDA

ANALYSIS MODULES

Email Thread Analysis
Advanced Text Pattern Search
Concept Searching & Grouping
Subject Matter Clustering
Regulatory Rules Analysis
Privileged & Confidential Data Identification
Custom Analysis Engine

Standard Features:

Forensic Data Collection with Certified Data Integrity
Legal Hold Workflow and Custodial Questionnaire

Robust Search & Data Analytics
Secure Remote User Interface
Detailed Reporting

De-duplication & Near Duplication
Information Tagging
Detailed Scheduling
